

Functional Requirements

1. The system shall provide a form where users can insert destination and date of departure.
2. The system shall provide to users a list of the available tickets for their destination.
3. The system shall provide a price comparison between tickets for a certain destination.

Regression bug perfective

The system asks to insert a pin to confirm payments by credit cards. To improve users' security, 2-steps authenticator is added. The bug is that now 2-steps authentication is required also if the user just wants to see the prices of available tickets for a certain destination.
